

## Frustrated by your computer?

Maybe a new system is **NOT** the answer.... And **NO**, we don't suggest using a **hammer** - Or tossing the system from a high bridge.

In the first place, you should always take care of properly disposing of electronics, which is both good for the environment and good for securing your personal information. In the second place, applying a hammer forcefully to your computer can cause plastic chips to fly up and cause injury, including blindness. And tossing the system from a bridge, building, helicopter, or catapult may cause ill will if it lands on someone's vehicle or pet - and you just cannot trust it to land on a bailed-out bank or insurance company executive.

**Instead**, perhaps your system just needs some expert attention and careful fine-tuning.

**Perhaps** your computer needs a **Spring Cleaning** – getting the dust and bugs out, and optimizing the system for smooth performance. Call RCL Systems to come and do a Spring Cleaning PC Checkup on all of your computers. Let our skilled technicians analyze your Windows system, security settings, hard drives, and data backup. Your system may just need some file maintenance, updates, or patches. If you do need a new system after all, we will apply 100% of the Spring Cleaning fee toward the purchase of a new system of \$1500 or more from RCL Systems within 30 days.\*
